Propositional Logic

Homework 1

Proposition, Propositional Variable
Conjunction, Disjunction, Negation

A **Proposition/Statement** is something which is **either true or false, but not both** simultaneously.

Note: A sentence Can NOT be called a Proposition/Statement if

- (i) It is an exclamation or imperative sentence
- (ii) It is an order or request or advice or command
- (iii) It is a question
- (iv) It is a paradox(self-contradictory)
- (v) It involves some variable and the truth value depends on this variable.

Example of propositions:

Example of propositions:

John loves CSE 191.

$2+3=5$.

$2+3=8$.

Sun rises from West.

Example of non-propositions:

Does John love CSE 191?

$2 + 3$.

Solve the equation $2 + x = 3$.

$2 + x > 8$.

NOTE :

This much understanding of “what is a proposition” is enough as the definition of “proposition” in English/Natural languages is vague and in mathematical world, it is simply a True or False Fact.

Some authors will consider “Today is Monday” as a proposition, whereas, other authors will consider same sentence as Non-proposition.

So, we will not worry about it too much and we just need to know that every proposition is either true or false but not both.

Question 1 : UGCNET-DEC2018-II: 1

1

In mathematical logic, which of the following are statements?

2.3k views

- i. There will be snow in January.
- ii. What is the time now?
- iii. Today is Sunday.
- iv. You must study Discrete mathematics

Choose the correct answer from the code given below:

- A. i and iii
- B. i and ii
- C. ii and iv
- D. iii and iv

Source : <https://gateoverflow.in/288376/ugcnet-dec2018-ii-1>

Solution 1: <https://gateoverflow.in/288376/Ugcnet-dec2018-ii-1?show=372580#c372580>

“Today is Sunday” is a Proposition ??

Some authors would consider it as a proposition (by fixing certain time, date, place etc), **Other authors** would not consider it as a proposition.

I suggest **NOT to waste too much time** on “which sentence is proposition?” type of question.

A Good exam will not ask such questions. If you find such questions in some test series, leave such test series.

In the (good)question, propositions will be **given** , not asked.

Example 1. Let p denote “Henry eats halibut” and q denote “Catherine eats kippers.”

- (a) The proposition $\neg p$ is read “Henry does not eat halibut.”
- (b) The proposition $p \wedge q$ is read “Henry eats halibut, and Catherine eats kippers.”
- (c) The proposition $p \rightarrow q$ is read “If Henry eats halibut, then Catherine eats kippers.”
- (d) The proposition $p \leftrightarrow q$ is read “Henry eats halibut if and only if Catherine eats kippers.”
- (e) The proposition $(\neg p) \vee (\neg q)$ is read “Henry does not eat halibut, or Catherine does not eat kippers.”
- (f) The proposition $p \leftrightarrow (\neg q)$ is read “Henry eats halibut if and only if Catherine does not eat kippers.”

NOTES :

The **negation of a statement p** in symbolic form is written as “ $\sim p$ ”.

Example :

Write the negation of the statement p :

p : New Delhi is a city.

Solution :

The negation of p is given by

$\sim p$: New Delhi is not a city

Or $\sim p$: It is not the case that New Delhi is a city.

Or $\sim p$: It is false that New Delhi is a city.

Or $\sim p$: It is not true that New Delhi is a city.

Question 2:

We have seen that for two propositional variables, we have 4 rows in truth table (because with two propositional variables, total 4 combinations of truth values are possible).

For three propositional variables, in the truth table, how many rows we have ?

For Four propositional variables, in the truth table, how many rows we have ?

For n propositional variables, in the truth table, how many rows we have ?

Question :

We have seen that for two propositional variables, we have 4 rows in truth table.

For three propositional variables, in the truth table, how many rows we have ?

For Four propositional variables, in the truth table, how many rows we have ?

For n propositional variables, in the truth table, how many rows we have ?

Q.: for 3 variables, In Truth Table,
we have 2^3 rows as every variable has 2 choices, True or false.

for n variable, no. of Rows in Truth Table = 2^n

Question 3:

It is known that $p \wedge q$ is false, also p is true.

What can we say about q ?

- A. True
- B. False.
- C. Nothing can be said
- D. Multiple Values

Question :

It is known that $p \wedge q$ is false, also p is true.

What can we say about q ?

A. True

~~B. False.~~

C. Nothing can be said

$p \wedge q \equiv \text{false}$ Given

$p = \text{True}$ Given

So, q has to be false.

$p \wedge q = \text{false}$
 $\Rightarrow q = \text{false}$

Question 4:

It is known that $p \vee q$ is false, also p is false.
What can we say about q ?

- A. True
- B. False.
- C. Nothing can be said
- D. Multiple Values

Question :

It is known that $p \vee q$ is false, also p is false.

What can we say about q ?

A. True

B. False.

C. Nothing can be said

$p \vee q = \text{false}$
 \downarrow
 false
 \downarrow
 $??$
 $\Rightarrow \underline{\underline{q = \text{false}}}$

$\text{false} \vee \text{True} = \text{True}$
 $\text{false} \vee \text{false} = \text{false}$

Question 5:

It is known that $p \wedge q$ is true, also p is true.

What can we say about q ?

- A. True
- B. False.
- C. Nothing can be said
- D. Multiple Values

Question :

It is known that $p \wedge q$ is true, also p is true.

What can we say about q ?

- A. ~~True~~
- B. False.
- C. Nothing can be said

$$\begin{array}{c} \textcircled{p} \wedge \textcircled{q} = \text{True} \\ \downarrow \quad \downarrow \\ \text{True} \quad ?? \end{array}$$

$$\left. \begin{array}{l} \text{True} \wedge \text{False} = \text{False} \\ \text{True} \wedge \text{True} = \text{True} \end{array} \right\}$$

$$q \equiv \text{True}$$

Question 6:

It is known that $p \vee q$ is true, also p is true.

What can we say about q ?

- A. True
- B. False.
- C. Nothing can be said
- D. Multiple Values

Question :

It is known that $p \vee q$ is true, also p is true.

What can we say about q ?

- A. True
- B. False.
- C. ☒ Nothing can be said

$\text{True} \vee \text{false} = \text{True}$

$\text{True} \vee \text{True} = \text{True}$

NOTE:

By the definition of a Proposition (or Propositional Variable), a proposition can NEVER have multiple truth values.

A proposition is Either True or False But Not Both.

For the previous question, answer will be “Truth Value can’t be determined”.. “Multiple Values” is a Wrong Answer.

Question 7:

It is known that p is true.

What can we say about $p \wedge q$?

- A. True
- B. False.
- C. Nothing can be said
- D. Multiple Values

Question :

It is known that p is true.

What can we say about $p \wedge q$?

A. True

B. False.

C. Nothing can be said

Question 8:

It is known that p is true.

What can we say about $(\neg p) \wedge q$?

- A. True
- B. False.
- C. Nothing can be said
- D. Multiple Values

Question :

It is known that p is true.

What can we say about $(\neg p) \wedge q$?

A. True

☒ B. False.

C. Nothing can be said

$p \equiv \text{True}; p' \equiv \text{False}$

(p') \wedge q

false

$\implies ?? = \text{false}$

$\text{false} \wedge \text{True} = \text{false}$
 $\text{false} \wedge \text{false} = \text{false}$

Question 9:

It is known that p is true.

What can we say about $\neg (p \wedge q)$?

- A. True
- B. False.
- C. Nothing can be said
- D. Multiple Values

Question :

It is known that p is true.

What can we say about $\neg (p \wedge q)$?

A. True

B. False.

☒ C. Nothing can be said

$$\neg (p \wedge q) \equiv ?$$

True

$$\text{True} \wedge q \equiv q$$

$$\neg (q) \begin{cases} \text{True} \\ \text{False} \end{cases}$$

Question 10:

It is known that p is true.

What can we say about $p \vee q$?

- A. True
- B. False.
- C. Nothing can be said
- D. Multiple Values

Question :

It is known that p is true.

What can we say about $p \vee q$?

- A. True
- B. False.
- C. Nothing can be said

$$\text{True } p \vee q \equiv ??$$

$$\left. \begin{array}{l} T \vee F \equiv T \\ T \vee T \equiv T \end{array} \right\}$$

$$\text{True } \vee q \equiv \text{True}$$

Question 11:

It is known that p is true.

What can we say about $(\neg p) \vee q$?

- A. True
- B. False.
- C. Nothing can be said
- D. Multiple Values

Question :

It is known that p is true.

What can we say about $(\neg p) \vee q$?

A. True

B. False.

~~C. Nothing can be said~~

$p \equiv \text{True}$, so $p' \equiv \text{false}$

$(p') \vee q$
True

$F \vee q \equiv q$ $\begin{cases} \text{True} \\ \text{or} \\ \text{false} \end{cases}$

Question 12:

It is known that p is true.

What can we say about $(p) \vee (\neg q)$?

- A. True
- B. False.
- C. Nothing can be said
- D. Multiple Values

Question :

It is known that p is true.

What can we say about $(p) \vee (\neg q)$?

- A. ☒ True
- B. ☐ False.
- C. ☐ Nothing can be said

$$p \equiv \text{True}$$

$$(p) \vee (q')$$

$$\text{True} \vee q' \equiv \text{True}$$

$$T \vee F \equiv T$$
