### Lecture 5 :

# Standard Forms of Boolean Expressions

## Minterm, Maxterm, SOP, POS

## Be Careful with Bars

$$\overline{XY} = \overline{X} + \overline{Y}$$

$$\overline{X}\overline{Y} \neq \overline{XY}$$

Let's check all the combinations of X and Y:

| X | Y | $\overline{X}$ | $\overline{Y}$ | $\overline{X} \cdot \overline{Y}$ | $XY$ | $\overline{XY}$ |
|---|---|----------------|----------------|-----------------------------------|------|-----------------|
| 0 | 0 | 1              | 1              | 1                                 | 0    | 1               |
| 0 | 1 | 1              | 0              | 0                                 | 0    | 1               |
| 1 | 0 | 0              | 1              | 0                                 | 0    | 1               |
| 1 | 1 | 0              | 0              | 0                                 | 1    | 0               |

## Boolean Algebra :

Next Topic :

Standard Forms of Boolean  
Expressions

## *Standard Boolean Expression Formats*

# CLASSES

## Standard Forms

- There are many ways to express a boolean expression

$$\begin{aligned} F &= XYZ + XY\bar{Z} + X\bar{Z} \\ &= XY(Z + \bar{Z}) + X\bar{Z} \\ &= XY + X\bar{Z} \end{aligned}$$

- It is useful to have a standard or canonical way
- Derived from truth table
- Generally not the simplest form

$$F = a + b$$

$$F = \bar{a}b + a\bar{b} + ab$$

| $a$ | $b$ | $f(a,b) = a+b$ |
|-----|-----|----------------|
| 0   | 0   | 0              |
| 0   | 1   | 1              |
| 1   | 0   | 1              |
| 1   | 1   | 1              |

$F = a + b$  is 1  
iff

$$\underbrace{a=0, b=1}_{\text{OR}} \quad \overline{a}b$$

$$\underbrace{a=1, b=0}_{\text{OR}} \quad a\overline{b}$$

$$\underbrace{a=1, b=1}_{\text{OR}} \quad ab$$

Over 2 Boolean variables, we can only have 16 different Boolean expressions/functions.

$$\underbrace{2}_{2} \binom{2}{2} = 2$$

Same Boolean expression/function can be written in many ways if some standard representation is not followed.

$$\overline{ab} \times$$

$$\overline{a} + \overline{b} \vee$$

## Some Definitions

- A **literal** is a complemented or uncomplemented boolean variable.
  - Examples:  $a$  and  $\bar{a}$  are distinct literals.  $\bar{a}+cd$  is not.
- A **product term** is a single literal or a logical product (AND) of two or more literals.
  - Examples:  $a$ ,  $\bar{a}$ ,  $ac$ ,  $\bar{a}cd$ ,  $aa\bar{a}b$  are product terms;  $\bar{a}+cd$  is not a product term.
- A **sum term** is a single literal or a logical sum (OR) of two or more literals.
  - Examples:  $a$ ,  $\bar{a}$ ,  $a+c$ ,  $\bar{a}+c+d$  are sum terms;  $\bar{a}+cd$  is not a sum term.

Sum Term ?

$$A + BB + c \times$$

$$A + B + c \checkmark$$

$$A + B \overline{B} \times$$

$A(B+B)c$  — Not a Product form

# Product and sum terms

---

- Product term: logical AND of literals (e.g.,  $X\bar{Y}Z$ )
- Sum term: logical OR of literals (e.g.,  $A + \bar{B} + C$ )

SOP : Sum(OR) of Product terms.

SOP form =  $P_1 + P_2 + P_3$

POS : Product(AND) of sum terms.

POS form =  $(S_1)(S_2)(S_3)$

Pos ?

$$a + b + c \checkmark$$

$$a + \bar{b} \checkmark$$

$$(a + b + c)$$

$$(a + \underline{\bar{b}})$$

We are talking about forms of  
Same Expression :

$\alpha\alpha$     }    same    But Different  
 $\alpha + \alpha$     }    forms.

Expression =  $a$

Two forms

$$a + aa$$

In SOP form

In POS form X

$$\underline{aa}$$

In POS  $(a)(a)$

In SOP  $(aa)$  ✓

$$(a + a)$$

NOT a sum term

$$(a) + (aa)$$

$$\overbrace{a+b+c}$$

Expression

- + In SOP? ✓  $(a)+(b)+(c)$
- + In POS? ✓  $(a+b+c)$

## Some Definitions

- A **sum of products (SOP)** expressions is a set of product (AND) terms connected with logical sum (OR) operators.
  - Examples:  $a, \bar{a}, ab+c, \bar{a}c+bde, a+b$  are SOP expressions.
  
- A **product of sum (POS)** expressions is a set of sum (OR) terms connected with logical product (AND) operators.
  - Examples:  $a, \bar{a}, a+b+c, (\bar{a}+c)(b+d)$  are POS expressions.

Sum of Product (SOP) form of an

Expression : Sum (OR) of Product terms.

e.g.:  $(E)(a + bc)$   $\Rightarrow$  in SOP form

E:  $a + b \bar{c}$  — Not In POS form

E:  $a + b$  { Fn POS ✓  $(a + b)$   
Is SOP  $(a) + (b)$

$$E : a + b c \longrightarrow \underbrace{\text{NOT in POS}}_{\text{This form}}$$

$$E : (a+b)(a+c) \longrightarrow \underbrace{\text{In POS}}_{\text{Now this form}}$$

$\alpha + \alpha\alpha\alpha$  — Not In Pos form

↓  
 $(\alpha + \alpha)$  — Now it is in  
Pos form.

Product of Sum (POS) form of an

Expression : Product(AND) of sum terms.

e.g.:  $\underline{\underline{E}} \rightarrow \underbrace{(a+b)}_{\text{term}} \cdot \underbrace{(b+c)}_{\text{term}} \Rightarrow \text{in POS form}$

Which Expression is in SOP form?

- 1 ~~(a+b+c)(c+a)~~
- 2 ~~a + b~~
- 3 ~~a~~ SOP ✓
- 4 ~~b~~ POS ✓
- 5 ~~(a+b')(b)~~
- 6 ~~a + \bar{a} + b~~

$$E = (ab + c)(c + a) \quad \text{This form is NOT SOP}$$

↓

$$E = abc + ab\bar{a} + \bar{c}\bar{c} + \bar{c}a \quad \text{This form is in SOP.}$$

Which Expression is in POS form?

~~(a+b+c). (c+a)~~

Not a  
sum  
term

~~b(a+b)~~

~~a~~

~~S (a +  $\bar{a}$ ) (b)~~

~~a~~

~~a b + c~~

$a + \bar{a} + b$

Which Expression is in SOP, POS form?

- ①  $a + b$  SOP ✓ (a) + (b)  
POS ✓ (a+b)
- ②  $a(b+c)$  POS ✓  
SOP X
- ③  $a + \bar{a} + b + bc$   
SOP ✓; POS X
- ④  $ab + ac$  SOP ✓  
POS X
- ⑤  $bc + ab$   
SOP ✓; POS X
- ⑥  $(a+bc)(c)$  SOP X  
POS X
- ⑦  $a + (b)(b+c)$  POS X  
SOP X

## Sum-of-Products

A sum-of-products (SOP) expression is a Boolean expression in a specific format. The term sum-of-products comes from the expression's form:

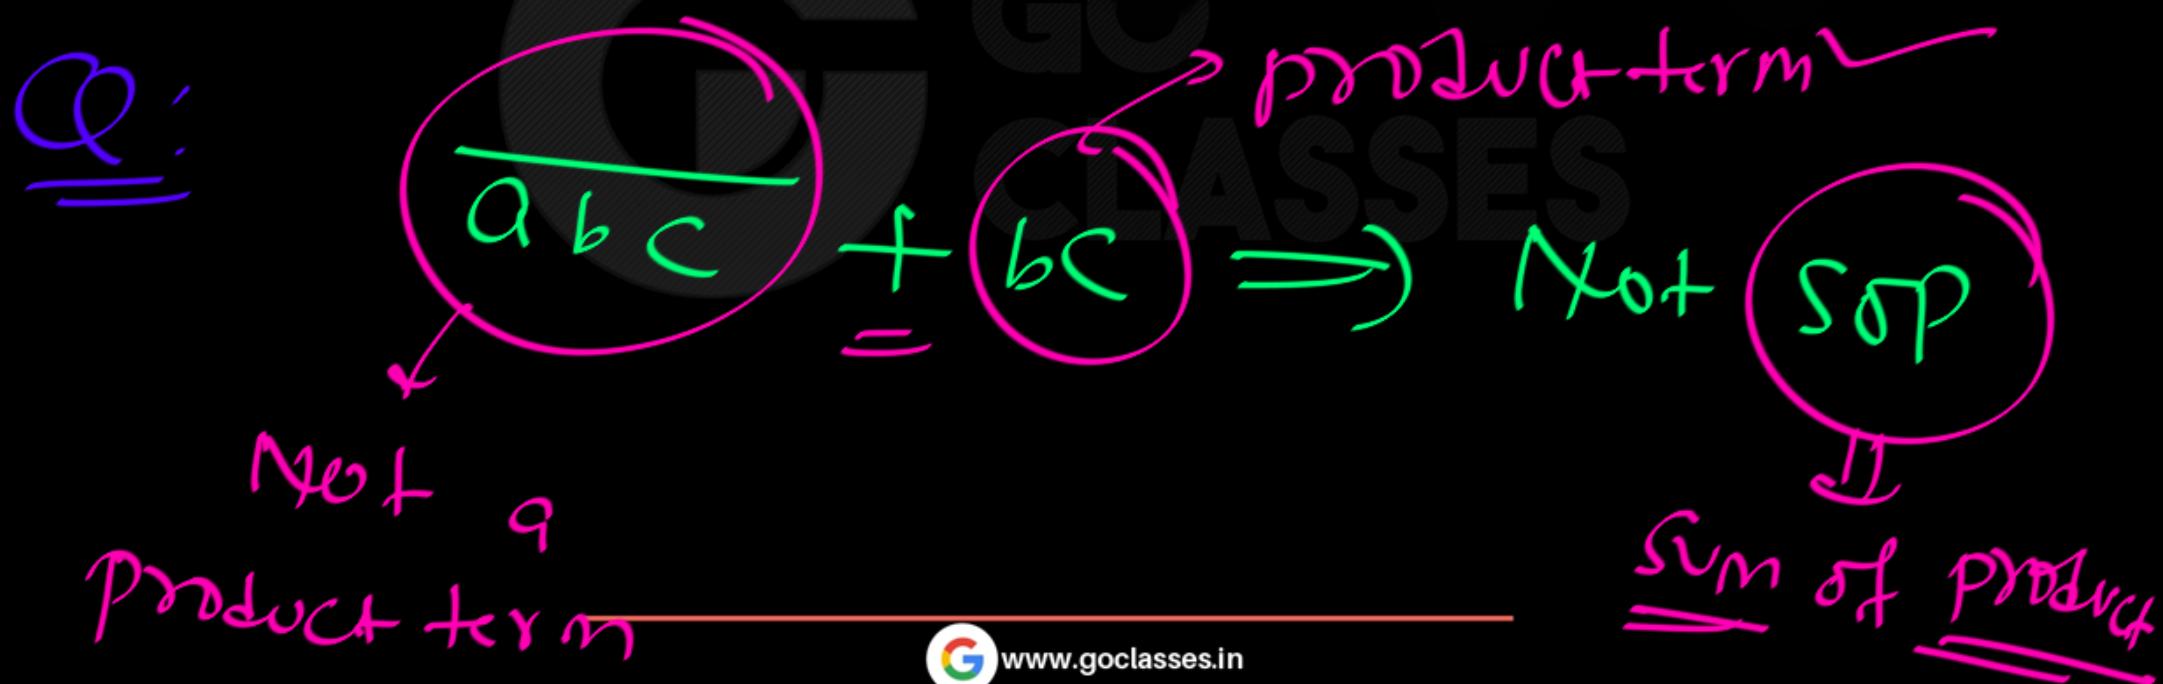

CLASSES

a sum (OR) of one or more products (AND).

Below is an example of an SOP expression:

$$\overline{A}\overline{B}\overline{C}\overline{D} + \overline{A}\overline{B}D + \overline{C}\overline{D} + \overline{A}\overline{D}$$

$$E = \overline{abc} + \overline{bc} \quad \text{--- NOT In SOP form}$$

↓

NOT Product term

$$E = \overline{a} + \overline{b} + \overline{c} + \overline{bc} \quad \text{In SOP form}$$

## Sum-of-Products

An SOP expression cannot have more than one variable combined in a term with an inversion bar.

The following is Not an SOP expression:

Not  
Product  
term

$$\overline{(AB)} \overline{CD} + \overline{ABD} + \overline{CD} + \overline{AD}$$

Q : Convert this expression into SOP form.

NOT SOP —  $(\overline{AB}) \overline{CD} + \overline{ABD} + \overline{CD} + \overline{AD}$

NOT SOP —  $(\overline{A} + \overline{B}) \overline{CD} + \overline{ABD} + \overline{CD} + \overline{AD}$

SOP —  $\overline{\overline{ACD}} + \overline{\overline{BCD}} + \overline{\overline{ABD}} + \overline{\overline{CD}} + \overline{\overline{AD}}$

This expression is now considered to be in SOP format.

$E: \overline{abc} \rightarrow$  Not in SOP form

$E: \overline{a} + \overline{b} + \overline{c} \Rightarrow$  Now in SOP form

$\overline{abc} \Rightarrow$  Not a product term

Product term: AND of literals.

$\overline{abc}$   $\Rightarrow$  Not a literal

$\overline{abc} \Rightarrow$  Not product of literals

$\underline{abc} \Rightarrow$  Product of literals.

## PoS & SoP

- Sum of products (SoP): OR of ANDs

$$\text{e.g., } F = \bar{Y} + \bar{X}YZ + XY$$

- Product of sums (PoS): AND of ORs

$$\text{e.g., } G = X(\bar{Y} + Z)(X + Y + \bar{Z})$$

# Do it yourself

- Put the right ticks in the following table.

| <i>Expression</i>                               | <i>SOP?</i> | <i>POS?</i> |
|---|-------------|-------------|
| $X' \cdot Y + X \cdot Y' + X \cdot Y \cdot Z$   |             |             |
| $(X+Y') \cdot (X'+Y) \cdot (X'+Z')$             |             |             |
| $X' + Y + Z$                                    |             |             |
| $X \cdot (W' + Y \cdot Z)$                      |             |             |
| $X \cdot Y \cdot Z'$                            |             |             |
| $W \cdot X' \cdot Y + V \cdot (X \cdot Z + W')$ |             |             |

# Do it yourself

- Put the right ticks in the following table.

| Expression                                      | SOP? | POS? |
|---|------|------|
| $X' \cdot Y + X \cdot Y' + X \cdot Y \cdot Z$   | ✓    | ✗    |
| $(X+Y') \cdot (X'+Y) \cdot (X'+Z')$             | ✗    | ✓    |

### ● Minterm

- ☞ An product of literals in which each variable is represented once and only once in either its complemented or uncomplemented form.

### ● Maxterm

- ☞ An sum of literals in which each variable is represented once and only once in either its complemented or uncomplemented form.

for 1 Variable  $a$ :

minterms:  $a, \bar{a}$

$$\# \text{minterms} = 2$$

max terms:  $a, \bar{a}$

$$\# \text{Max terms} = 2$$

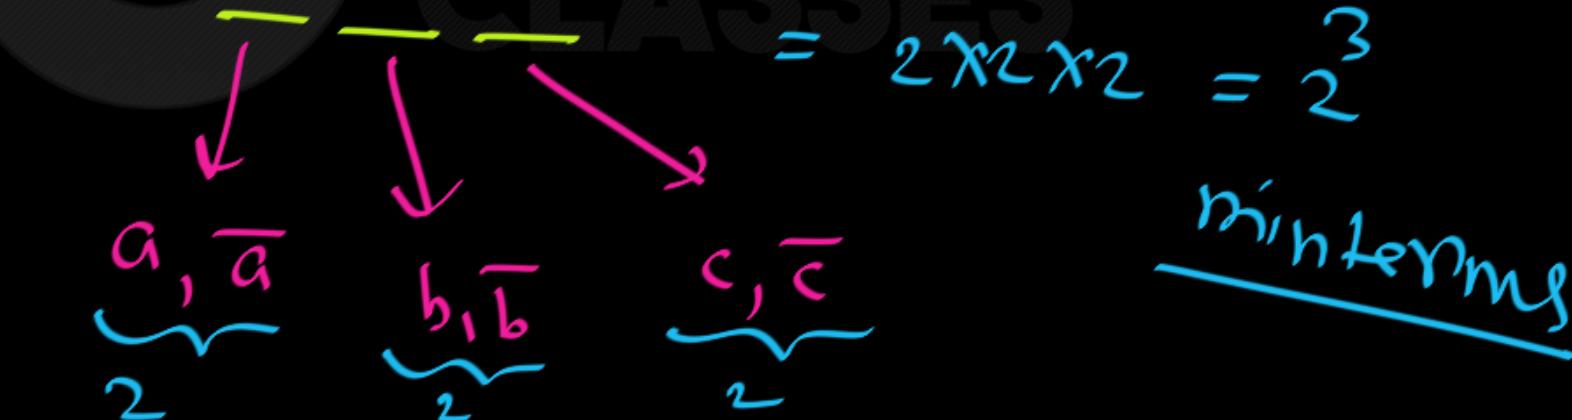

for 3 variables  $a, b, c$

minterms:

$\underline{abc}, \underline{\bar{a}bc}, \underline{ab\bar{c}}, \underline{\bar{a}\bar{b}\bar{c}}, \dots$

Product term

for 3 variables  $a, b, c$ ;

Maxterms  $\Rightarrow a+b+c, \bar{a}+\bar{b}+c, \bar{a}+\bar{b}+\bar{c}, \dots$

Sum Term

$$\overbrace{a+b+c}^{\text{Maxterm}} = 2 \times 2 \times 2 = 2^3 = 8$$

$$\underbrace{a, \bar{a}}_2 \quad \underbrace{b, \bar{b}}_2 \quad \underbrace{c, \bar{c}}_2$$

Maxterm

$$a+b+c = a+c+b$$

Note: In all definitions

(sum term, product term, minterm, maxterm,  
SOP, POS)

Order of terms/literals Does not  
matter.

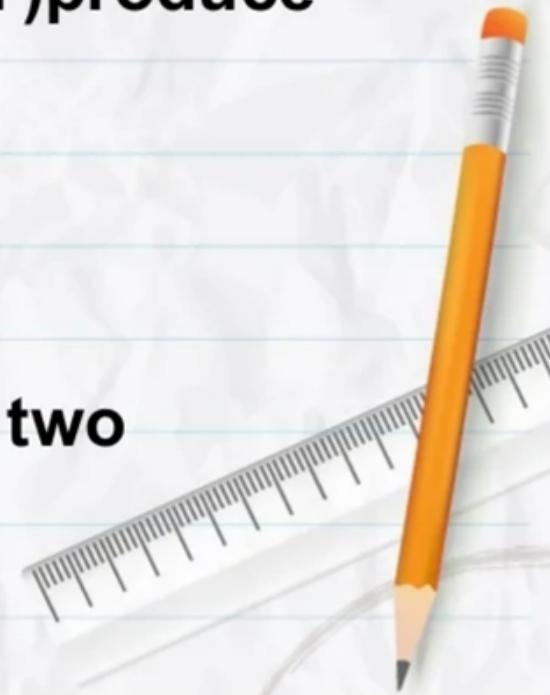

for n variables :  $\{a_1, a_2, \dots, a_n\}$

$$\#\text{min terms} = 2^n \quad \dots \dots \dots = 2^n \checkmark$$

$$\#\text{max terms} = 2^n \quad - + - + - + - + - \\ = 2^n$$

- **Minterms** are AND terms with **every variable** present in either true or complemented form.
- Given that each binary variable may appear normal (e.g.,  $x$ ) or complemented (e.g.,  $\bar{x}$ ), there are  $2^n$  minterms for  $n$  variables.
- **Example:** Two variables ( $X$  and  $Y$ ) produce  $2 \times 2 = 4$  combinations:
  - (both normal)
  - ( $X$  normal,  $Y$  complemented)
  - ( $X$  complemented,  $Y$  normal)
  - (both complemented)
- Thus there are **four minterms** of two variables.

# Minterm

- A minterm of  $n$  variables = product of  $n$  literals in which each variable appears exactly once either in T or F form, but not in both. (Also known as a standard product term)

# Minterm and Maxterm

- For a switching function, a **literal** is defined as a variable in uncomplemented or complemented form.
  - Example:  $x, x', y, y'$ , etc.
- Consider an  $n$ -variable switching function  $f(x_1, x_2, \dots, x_n)$ .
  - A product term (that is, an AND operation) of all the  $n$  literals is called a **minterm**.
  - A sum term (that is, an OR operation) of all the  $n$  literals is called a **maxterm**.
- Consider a 3-variable function  $f(A, B, C)$ .
  - Examples of minterm:  $A' \cdot B' \cdot C'$ ,  $A \cdot B' \cdot C$ ,  $A \cdot B \cdot C$ , etc.
  - Examples of maxterm:  $(A + B' + C')$ ,  $(A' + B' + C')$ ,  $(A + B + C)$ , etc.

# Minterms and Maxterms (1/2)

- A **minterm** of  $n$  variables is a product term that contains  $n$  literals from **all** the variables.

Example: On 2 variables  $x$  and  $y$ , the minterms are:

$x' \cdot y'$ ,  $x' \cdot y$ ,  $x \cdot y'$  and  $x \cdot y$

- A **maxterm** of  $n$  variables is a sum term that contains  $n$  literals from **all** the variables.

Example: On 2 variables  $x$  and  $y$ , the maxterms are:

$x' + y'$ ,  $x' + y$ ,  $x + y'$  and  $x + y$

- In general, with  $n$  variables we have  $2^n$  minterms and  $2^n$  maxterms.

Analysis of minterm:

$f(a, b) \rightarrow$  minterm :

let's consider it as a function

| a | b | $\bar{a}b$ | $\bar{a}\bar{b}$ | $ab$ | $a\bar{b}$ |
|---|---|------------|------------------|------|------------|
| 0 | 0 | 0          | 1                | 0    | 0          |
| 0 | 1 | 1          | 0                | 0    | 0          |
| 1 | 0 | 0          | 0                | 0    | 1          |
| 1 | 1 | 0          | 0                | 1    | 0          |

So, Every minterm is 1 for Exactly

one Row (input Combination)

e.g:  $\bar{a}\bar{b}$  is 1 for  $a=0, b=0$  row;  
So, we say that  $\bar{a}\bar{b}$  is the  
minterm associated with row  $a=0, b=0$

Similarly,

minterm  $\bar{a} b$  is Associated with  $a=0, b=1$   
Row.

"  $a \ b$  " " " "  $a=1, \ b=1$

"  $a \bar{b}$  " " " "  $a=1, \ b=0$

|     |     | <u>Associates</u>     |
|-----|-----|-----------------------|
| $a$ | $b$ | minterm with each Row |
| 0   | 0   | $\bar{a} \bar{b}$     |
| 0   | 1   | $\bar{a} b$           |
| 1   | 0   | $a \bar{b}$           |
| 1   | 1   | $ab$                  |

Observe:

$a=0, b=1$ , minterm  $\bar{a} b$

$a=0, b=0$ , minterm  $= \bar{a} \bar{b}$

$f(a, b, c)$

| a | b | c | (Associated)<br>minterm   | Product<br>term |
|---|---|---|---------------------------|-----------------|
| 0 | 0 | 0 | $\bar{a} \bar{b} \bar{c}$ |                 |
| 0 | 0 | 1 | $\bar{a} \bar{b} c$       |                 |
| 0 | 1 | 0 | $\bar{a} b \bar{c}$       |                 |
| 0 | 1 | 1 | $\bar{a} b c$             |                 |
| 1 | 0 | 0 | $a \bar{b} \bar{c}$       |                 |
| 1 | 0 | 1 | $a \bar{b} c$             |                 |
| 1 | 1 | 0 | $a b \bar{c}$             |                 |
| 1 | 1 | 1 | $a b c$                   |                 |

Analysis of maxterm : sum term

$f(a,b)$   $\rightarrow$  maxterm  $\overline{a} + b$   $\rightarrow$  Let's consider it as a function

| a | b | $\overline{a} + b$ | $\overline{a} + \overline{b}$ | $a + \overline{b}$ | $a + b$ |
|---|---|--------------------|-------------------------------|--------------------|---------|
| 0 | 0 | 1                  | 1                             | 1                  | 0       |
| 0 | 1 | 1                  | 1                             | 0                  | 1       |
| 1 | 0 | 0                  | 1                             | 1                  | 1       |
| 1 | 1 | 1                  | 0                             | 1                  | 1       |

Every maxterm is 0 for Exactly  
one Row (Input Combination)

Eg: maxterm  $\bar{a} + b$  is 0 for  $a=1, b=0$   
So, we say that maxterm  $\bar{a} + b$  is  
Associated with  $a=1, b=0$  Row.

Similarly,

maxterm  $a+b$  is associated with  $a=0, b=0$

Short Notation for  
min term

|   | a | b | min terms                 |
|---|---|---|---------------------------|
| 0 | 0 | 0 | $\bar{a} \bar{b}$ = $m_0$ |
| 1 | 0 | 1 | $\bar{a} b$ = $m_1$       |
| 2 | 1 | 0 | $a \bar{b}$ = $m_2$       |
| 3 | 1 | 1 | $a b$ = $m_3$             |

|       |   | Maxterm           | Short Notation |                                   |
|-------|---|-------------------|----------------|-----------------------------------|
| a     | b | $a+b$             | $M_0$          | $m_2 = a\bar{b}$                  |
| 0 - 0 | 0 | $a+\bar{b}$       | $M_1$          | $b\bar{a}$                        |
| 1 - 0 | 1 | $\bar{a}+b$       | $M_2$          | $a\bar{b}$                        |
| 2 - 1 | 0 | $\bar{a}+\bar{b}$ | $M_3$          | $b\bar{a}$                        |
| 3 - 1 | 1 |                   |                | $m_3 = \underline{\underline{a}}$ |

we fix  
a order

max term for  
binary value 3.

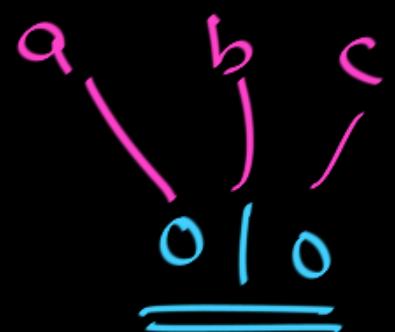

Note :

for short notation of minterm,  
maxterm ( $m_i, M_i$ ), one fixed  
order of variables is considered.

E.L.:  $f(a, b, c) \Rightarrow$

$$m_0 = \bar{a} \bar{b} \bar{c}$$

$$m_2 = \bar{a} b \bar{c}$$

Eg:  $f(c, a, b)$

Ans

$c \backslash \begin{matrix} 0 & 1 \\ | & | \\ a & b \end{matrix}$

$$m_3 = \overline{c}ab$$

$$m_2 = \overline{c}\overline{a}\overline{b}$$

$a \backslash \begin{matrix} 0 & 1 \\ | & | \\ b & \end{matrix}$

Note: by default, the order is  
"Alphabetical".

Ex:    abc    |    wxyz    |    dry  
      dryz    |    ny            |    perst  
      pqrs    |    ab

*Minterms and Maxterms for Three Binary Variables*

4

## Minterms and Maxterms (2/2)

- The minterms and maxterms on 2 variables are denoted by **m0 to m3** and **M0 to M3** respectively.

| x | y | Minterms      |          | Maxterms  |          |
|---|---|---------------|----------|-----------|----------|
|   |   | Term          | Notation | Term      | Notation |
| 0 | 0 | $x' \cdot y'$ | $m_0$    | $x + y$   | $M_0$    |
| 0 | 1 | $x' \cdot y$  | $m_1$    | $x + y'$  | $M_1$    |
| 1 | 0 | $x \cdot y'$  | $m_2$    | $x' + y$  | $M_2$    |
| 1 | 1 | $x \cdot y$   | $m_3$    | $x' + y'$ | $M_3$    |

- Each minterm is the complement of the corresponding maxterm

- Example:  $m_2 = x \cdot y'$

$$m_2' = (x \cdot y')' = x' + (y')' = x' + y = M_2$$

# Standard Order

- Minterms and maxterms are designated with a subscript
- The subscript is a number, corresponding to a binary pattern
- The bits in the pattern represent the complemented or normal state of each variable listed in a standard order.
- All variables will be present in a minterm or maxterm and will be listed in the same order (usually alphabetically)
- Example: For variables a, b, c:
  - Maxterms:  $(a + b + \bar{c})$ ,  $(a + b + c)$
  - Terms:  $(b + a + c)$ ,  $a\bar{c}b$ , and  $(c + b + a)$  are NOT in standard order.
  - Minterms:  $\bar{a}\bar{b}c$ ,  $abc$ ,  $a\bar{b}\bar{c}$
  - Terms:  $(a + c)$ ,  $\bar{b}c$ , and  $(\bar{a} + b)$  do not contain all variables

# Purpose of the Index

- The index for the minterm or maxterm, expressed as a binary number, is used to determine whether the variable is shown in the true form or complemented form.
- For Minterms:
  - “1” means the variable is “Not Complemented” and
  - “0” means the variable is “Complemented”.
- For Maxterms:
  - “0” means the variable is “Not Complemented” and
  - “1” means the variable is “Complemented”.

| a | b | c | d |  | <u>min term</u>             | <u>max term</u>             |
|---|---|---|---|--|-----------------------------|-----------------------------|
| 0 | 1 | 0 | 0 |  | $\bar{a} b \bar{c} \bar{d}$ | $a + \bar{b} + c + d$       |
| 1 | 0 | 1 | 0 |  | $a \bar{b} c \bar{d}$       | $\bar{a} + b + \bar{c} + d$ |

# Index Example in Three Variables

- Example: (for three variables)
- Assume the variables are called X, Y, and Z.
- The standard order is X, then Y, then Z.
- The Index 0 (base 10) = 000 (base 2) for three variables.  
All three variables are complemented for minterm 0 ( $\bar{X}, \bar{Y}, \bar{Z}$ ) and no variables are complemented for Maxterm 0 ( $X, Y, Z$ ).
  - Minterm 0, called  $m_0$  is  $\bar{X} \cdot \bar{Y} \cdot \bar{Z}$
  - Maxterm 0, called  $M_0$  is  $(X + Y + Z)$
  - Minterm 6 ? =  $\bar{X} \cdot Y \cdot \bar{Z}$
  - Maxterm 6 ? =  $\bar{X} + \bar{Y} + \bar{Z}$

110

# Index Examples - Four Variables

Index Binary Minterm Maxterm

| i  | Pattern | $m_i$                          | $M_i$                             |

# Function Tables for Both

- Minterms of 2 variables

| x y | $m_0$ | $m_1$ | $m_2$ | $m_3$ |
|-----|-------|-------|-------|-------|
| 0 0 | 1     | 0     | 0     | 0     |
| 0 1 | 0     | 1     | 0     | 0     |
| 1 0 | 0     | 0     | 1     | 0     |
| 1 1 | 0     | 0     | 0     | 1     |

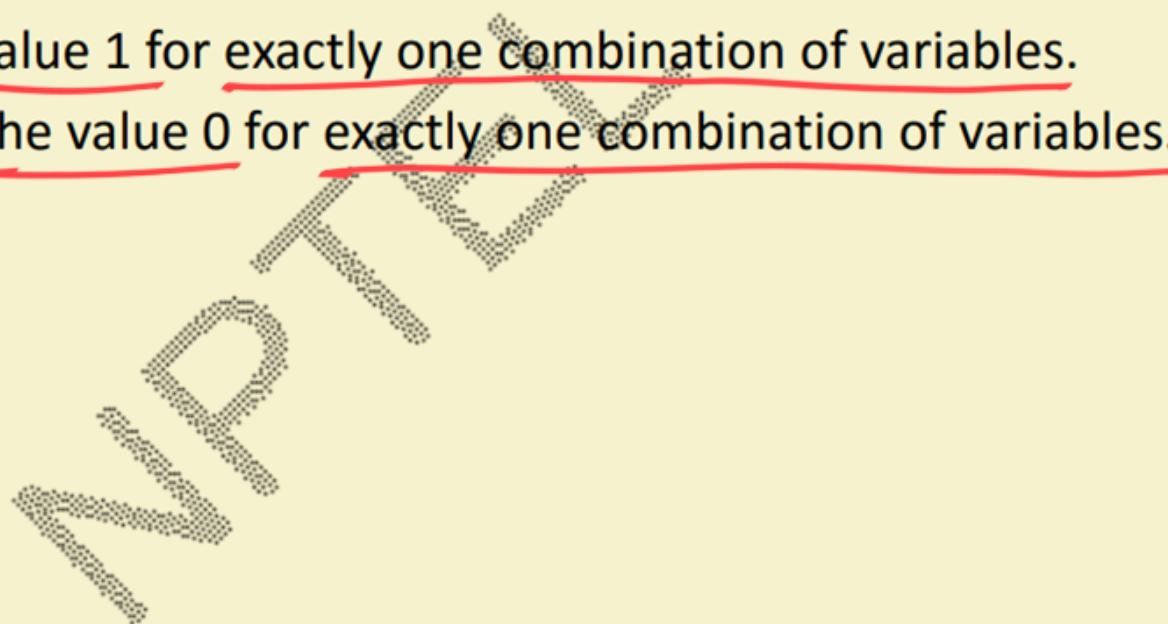

- Maxterms of 2 variables

| x y | $M_0$ | $M_1$ | $M_2$ | $M_3$ |
|-----|-------|-------|-------|-------|
| 0 0 | 0     | 1     | 1     | 1     |
| 0 1 | 1     | 0     | 1     | 1     |
| 1 0 | 1     | 1     | 0     | 1     |
| 1 1 | 1     | 1     | 1     | 0     |

- Each column in the maxterm function table is the complement of the column in the minterm function table since  $M_i$  is the complement of  $m_i$ .

- Properties of minterms and maxterms:
  - A minterm assumes value 1 for exactly one combination of variables.
  - A maxterm assumes the value 0 for exactly one combination of variables.
- Example:

## Minterms

Each row has a unique minterm

| X | Y | Minterm          | $\bar{X}\bar{Y}$ | $\bar{X}Y$ | $X\bar{Y}$ | $XY$ |
|---|---|------------------|------------------|------------|------------|------|
| 0 | 0 | $\bar{X}\bar{Y}$ | 1                | 0          | 0          | 0    |
| 0 | 1 | $\bar{X}Y$       | 0                | 1          | 0          | 0    |
| 1 | 0 | $X\bar{Y}$       | 0                | 0          | 1          | 0    |
| 1 | 1 | $XY$             | 0                | 0          | 0          | 1    |

The minterm is the product term that is 1 for only its row

## Maxterms

Each row has a unique maxterm

| X | Y | Maxterm           | $X+Y$ | $X+\bar{Y}$ | $\bar{X}+Y$ | $\bar{X}+\bar{Y}$ |
|---|---|-------------------|-------|-------------|-------------|-------------------|
| 0 | 0 | $X+Y$             | 0     | 1           | 1           | 1                 |
| 0 | 1 | $X+\bar{Y}$       | 1     | 0           | 1           | 1                 |
| 1 | 0 | $\bar{X}+Y$       | 1     | 1           | 0           | 1                 |
| 1 | 1 | $\bar{X}+\bar{Y}$ | 1     | 1           | 1           | 0                 |

The maxterm is the sum term that is 1 for only its row

# Minterm and Maxterm Relationship

- Review: DeMorgan's Theorem

$$\overline{x \cdot y} = \overline{x} + \overline{y} \text{ and } \overline{x + y} = \overline{x} \cdot \overline{y}$$

- Two-variable example:

$$M_2 = \overline{x} + y \text{ and } m_2 = x \cdot \overline{y}$$

Thus  $M_2$  is the complement of  $m_2$  and vice-versa.

- Since DeMorgan's Theorem holds for  $n$  variables,  
the above holds for terms of  $n$  variables
- giving:

$$M_i = \overline{m}_i \text{ and } m_i = \overline{M}_i$$

Thus  $M_i$  is the complement of  $m_i$ .

 $f(a, b, c)$ 

$m_6 = a b \bar{c}$

$M_6 = \bar{a} + \bar{b} + c$

$\overline{m_6} = \overline{a b \bar{c}} = \overbrace{\bar{a} + \bar{b} + c}$

 $M_6$
